

Tint Kits With Air Assisted Mandrels

The RotoMetrics Air-Assisted Tint Kit allows printers to flood coat, tint or varnish the web from any print station. And because it's air-assisted, the kit also lets you change the tinting rubber quickly and easily.

RotoMetrics tint kit works so effectively because the mandrel contains small air jets. When air is injected into the mandrel through an air valve built into the probe assembly (which is inserted into the mandrel), the rubber sleeve installs and removes easily—making this a simple, one-person job.

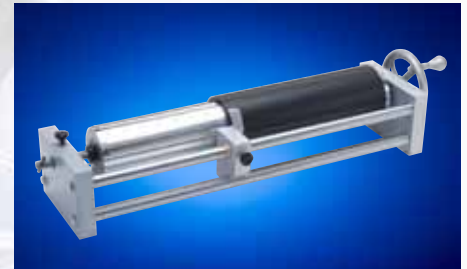

Features:

- Mandrel and gear (with standard kit)
- 18" long rubber sleeve (with standard kit; also available in varying lengths and durometers)
- Air probe assembly
- Mounting bracket
- Collars to secure rubber after installation

Advantages:

- Air jets built into the mandrel make installation and removal of the rubber sleeve quick and easy
- One man make-ready
- Additional types of rubber sleeves available, depending upon application

For more information about RotoMetrics Air-Assisted Tint Kits, as well as tint kits without the air-assist feature, plus our complete line of rotary tooling—or for answers to your technical questions—contact your RotoMetrics sales representative.

Also available: Rubber Cutters with Air-Assisted Mandrels

RotoMetrics rubber cutter with air-assisted mandrel uses the same air-jet construction as our tint kit for ease of use. It also allows you to cut specific lengths of rubber precisely and cleanly, even when cutting extremely small lengths.
